

K P VANITHA

Software Engineer | Java Developer | QA Automation Engineer

 kpvanitha14@gmail.com |

Location: Madurai, India

PROFESSIONAL SUMMARY

Software Engineer with 1 year of experience in API development, migration, and test automation within the banking domain. Skilled in Java, Selenium WebDriver, Playwright, TestNG, Cucumber, REST APIs, and SOAP Web Services. Hands-on experience in SOAP-to-REST migration, automation framework development using POM, API validation, and regression testing. Experienced in working within Agile (Scrum) environments, using tools such as GitHub, JIRA, Octane, and Checkmarx for version control, defect management, and security validation. Strong interest in Software Development and QA Automation Engineering roles.

PROFESSIONAL EXPERIENCE

Capgemini | Java Developer / QA Automation Engineer

July 2025 – Present | Bangalore, India

Client: Wells Fargo | Banking Domain

Application: Service Vision Platform (SVP)

Responsibilities:

- Improved service interoperability and API modernisation by migrating legacy **SOAP web services to REST APIs** using **Spring Boot, Spring MVC, and a monolithic architecture** following REST design principles and HTTP methods.
- Enhanced backend data transformation accuracy and maintainability by developing reusable utility/service layers, **XML-to-JSON mappings**, and applying clean coding and basic **SOLID principles** using Java.
- Improved application reliability and reduced defect leakage by implementing **JUnit-based unit testing**, exception handling, and API validation for backend business services.
- Reduced manual regression effort and increased automation coverage by developing automation frameworks using **Selenium WebDriver (Java), TestNG, Playwright, Cucumber, and Page Object Model (POM)** with data-driven testing practices.
- Improved API validation efficiency through automation of regression and functional test cases.
- Improved testing efficiency and validation traceability by creating and maintaining **Manual and Gherkin test cases** in **Octane** for functional, integration, regression, and cross-browser testing.
- Strengthened application security compliance and code quality by resolving vulnerabilities identified through **Checkmarx** security scans and participating in **code review and pull request workflows** using GitHub.
- Improved sprint delivery efficiency by working in **Agile (Scrum)** environments using **JIRA**, defect triage, and version control best practices.

Human Resource Management System (HRMS) – Capgemini Training Project | 2025

- Designed and developed HRMS using **Java, Spring Boot, and Spring MVC**.
- Built REST APIs following **standard HTTP methods and status codes**.
- Developed UI using **Thymeleaf** integrated with backend services.
- Implemented database operations using **JDBC and JPA (Hibernate)**.
- Applied **exception handling and clean coding practices**.
- Wrote unit test cases using **JUnit and Mockito**.
- Used **Git** for version control and collaboration.
- Deployed application locally and monitored performance.

TECHNICAL SKILLS

- Languages:** Java, HTML
- Frameworks:** Spring Boot, Spring MVC
- Automation Testing:** Selenium WebDriver, Playwright, TestNG, JUnit, Cucumber (BDD), POM
- API Testing:** REST APIs, Postman, SOAP UI
- Tools:** GitHub, JIRA, IntelliJ, VS Code, Checkmarx

- **Databases:** *MySQL, Oracle*
- **Methodologies:** *Agile (Scrum), SDLC, STLC*

HIGHER EDUCATION

- Degree:** *Bachelor of engineering in computer Science Engineering*
- Institution:** *Mepco Schlenk Engineering College, Sivakasi, Tamil Nadu*
- University:** *Anna University*
- Graduated Year:** *2024*

Area Of Interests

- Software Engineer
- QA Automation Test Engineer

Soft skills

- I adapt swiftly to new tools and technologies.
- I am deeply committed to achieving excellence in my field.
- I excel at articulating ideas clearly and concisely.
- I am self-driven & consistently strive for excellence.
- I adapt easily to changing circumstances & challenges.
